Uptick

Founder House Singapore, 2026

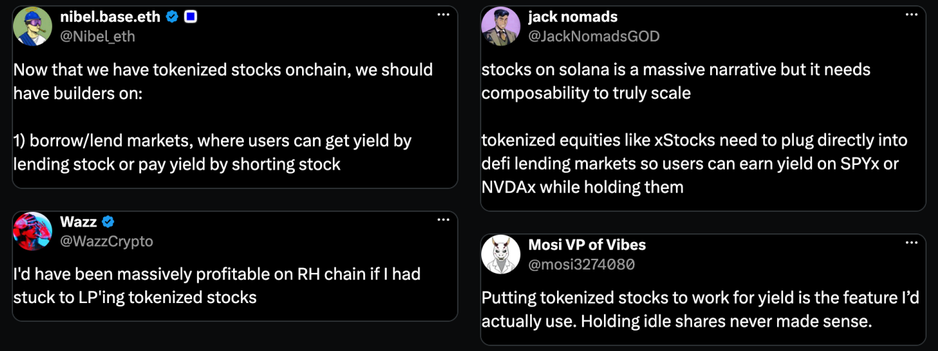

Robinhood made Stock Tokens collateral on Morpho, but collateral earns nothing.

Uptick puts your Stock Token to work earning trading fees, and you can still borrow against it.

189,012 wallets hold NVDA on Robinhood Chain

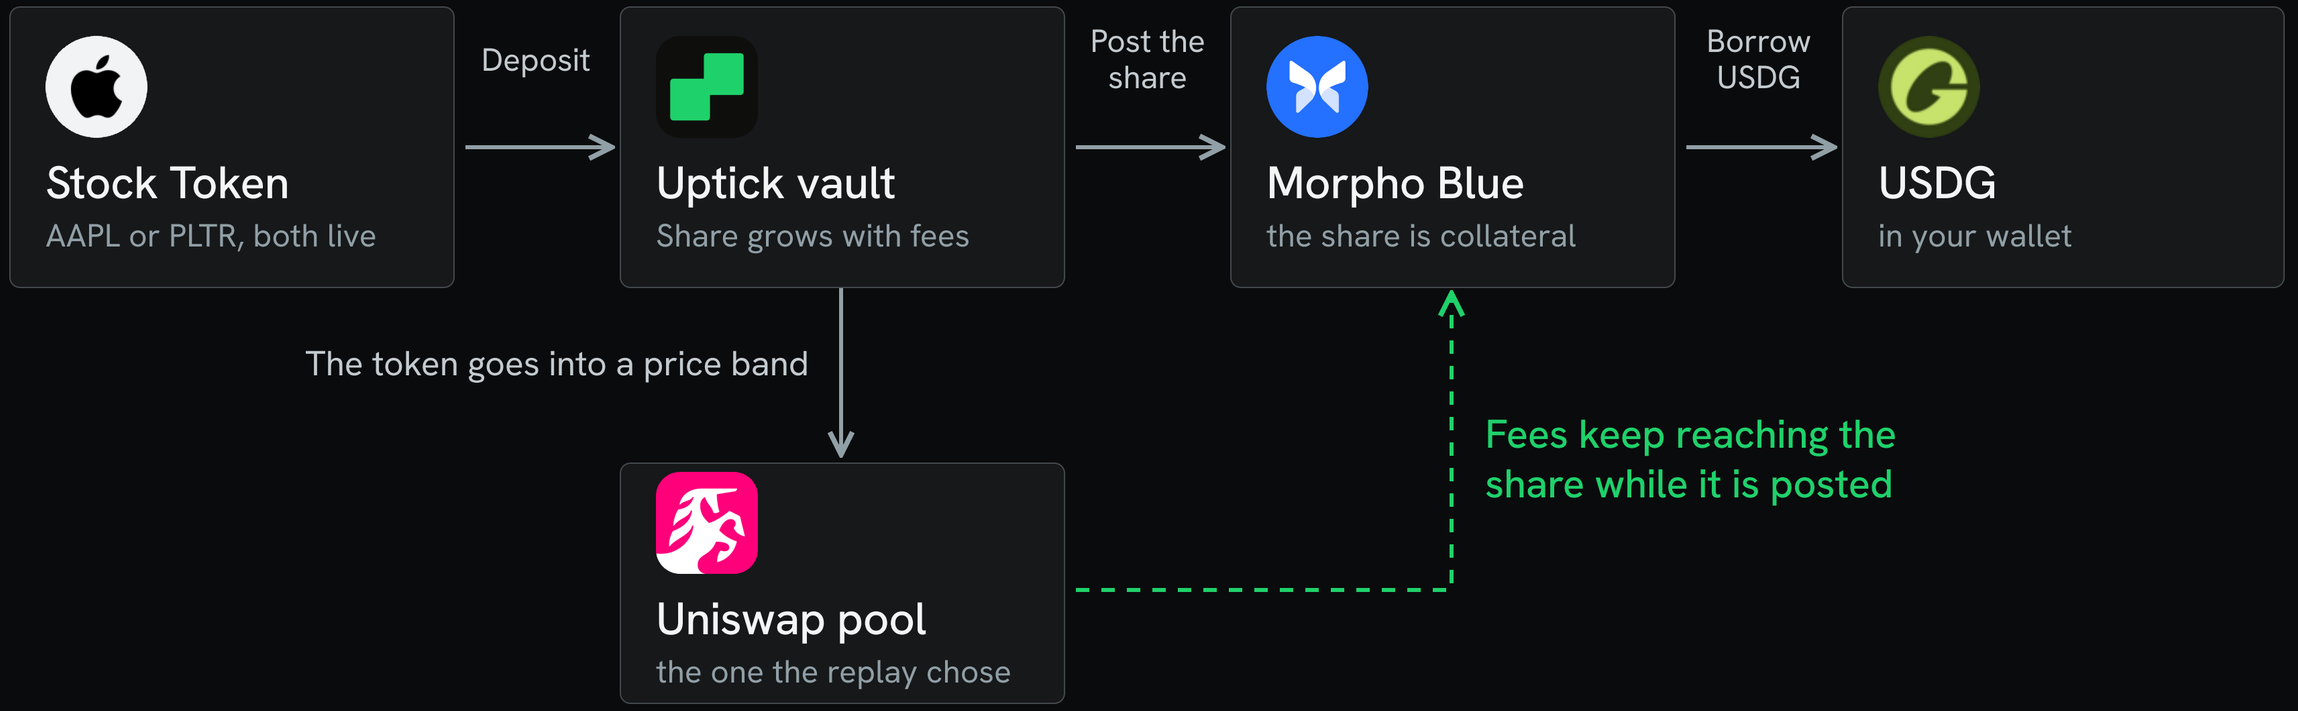

@RobinhoodCrypto on X, 2026-10-22.

Four holders asking for yield on Stock Tokens, on X.

One deposit earns fees in a Uniswap pool and backs a loan on Morpho.

Exit in kind, any time.

Both tokens come back, with no oracle, no swap and no pause in the way.

Source: deployments/4663.json, contracts/SECURITY.md (redeemInKind), scripts/fork-demo.sh.

The only Stock Token position that earns fees and can be posted as collateral.

Who uses it

Stock Token holders on Robinhood Chain

Non-US Robinhood customers. First the AAPL and PLTR holders and the Morpho borrowers.

Who pays

Up to 10%

Of fees, from depositors

Charged only where holders still keep money after it. 0% at launch.

Lending side

Morpho curators and lenders

Such as Steakhouse and Zona, for the AAPL share market.

Source: deployments/4663.json (AAPL and PLTR vaults), docs/SUBMISSION.md and main deck (fee share, lenders). Morpho API, 2026-10-24.

Everything else gives up fees, collateral or your stock.

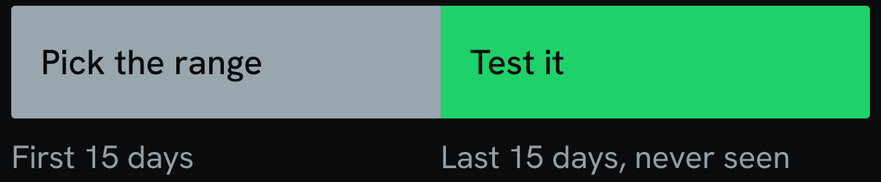

Way to hold a Stock Token	Earns fees	Posted on Morpho	Keeps your stock	Live on mainnet
Uptick share Earns the pool fees, no expiry	✓	✓	✓	✓
DIY Uniswap LP Blind range: the SPCX pool paid 116.7% in fees, LPs kept -195.4%	✓	—	✓	✓
Plain Morpho collateral Posted on Morpho, it earns 0%	—	✓	✓	✓
AutoRange No share token, nothing to post	✓	—	✓	✓
Fables A v4 position is an NFT. Uptick's pool keeps more on 11 of 12 replayable tokens	✓	—	✓	✓
Vexi Testnet options: pays a premium for selling your upside within hours	—	—	—	—

Source: keeper/data/replay.json (SPCX, held-out half), keeper/data/fables-replay.json, competitors/autorange-factory/src/STUDY.md, deployments/4663.json.

Fee rate is not what an LP keeps, so we replayed the swaps.

3,059,881

real swaps from the chain's 17 Stock Token pools, 30 days to 2026-10-17.

What the replay decided

Which tokens	3 open, 9 reduced, 5 closed
Which pool	PLTR on v4 +7.9% against v3 -18.9%
Range width	NVDA ±1.5%, AAPL ±7.5%
Recentre time	After each trading session
Vault size	At most 20% of the pool's in-range liquidity

Kept is fees less losses to informed traders and rebalancing cost. That is the number the vault is judged on.

Source: keeper/data/replay.json, web/lib/vault-universe.json, docs/facts.json. PLTR figures are the held-out half, annualised.

Live on Robinhood Chain mainnet, verified on Sourcify.

Contracts	Vaults	Morpho market	Agent tools
7 of 7	**2**	**Live**	**10**
exact match on creation and runtime code	AAPL on Uniswap v3, PLTR on Uniswap v4, $5,000 cap each	USDG against the AAPL share, created at block 96394191	on one live MCP endpoint

AAPL share market	0x80bd...de5b	PLTR ShareOracle	0x613F...f0A4

Mainnet, verified and capped at $5,000 a vault, with an agent endpoint answering live.

Source: deployments/4663.json, Sourcify v2 API and MCP tools/list, 2026-10-24. Morpho market created at block 96394191.

We are raising a $2M pre-seed to open a vault on every Stock Token.

$2M The round buys

A vault for every Stock Token
Opened once the replay shows it keeps money.

An external audit
Of the contracts that hold depositors' tokens.

Two engineers
On the keeper and the risk engine.

From Founder House

Holders who size a first deposit
AAPL and PLTR holders on Robinhood Chain.

A curator and a lender for the AAPL share market
A curator such as Steakhouse, a lender such as Zona.

An integration conversation with Pendle
A Pendle market on the Uptick share: a new yield source for non-dividend Stock Tokens, next to Pendle's PFE market on Robinhood Chain.
